

EXCELLA®

YKK®

Little Parts. Big Difference.™

Crafted with the utmost care, EXCELLA® is a series defined by clean, sharp design - a symbol of refinement, quality, and elegance. It represents the synthesis of beauty and premium craftsmanship.

The polished metal zipper features preformed, scratch-resistant, anti-snag elements, meticulously applied one by one to the tape to ensure smooth sliding of the slider and a soft touch.

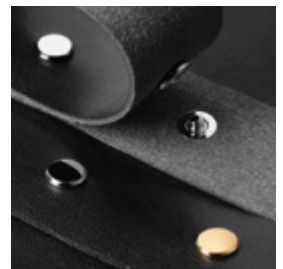

EXCELLA® NATULON® is a zipper made with recycled polyester tape - a product YKK began developing even before the industry's heightened focus on sustainable materials. As YKK moves toward its goal of using 100% sustainable (recycled or naturally derived) materials in its fastening products by 2030, the company continues to address key challenges in innovation and supply chain transformation.

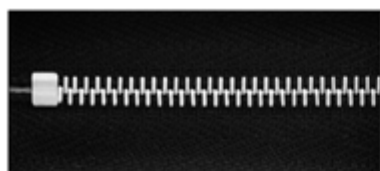

EXCELLA® Light belongs to the EXCELLA® series but features aluminium alloy elements. This lightweight material maintains the high strength and smooth performance of the original EXCELLA®. Its anodised finish allows for a wide variety of colours and custom blends, delivering a distinctive and inimitable style.

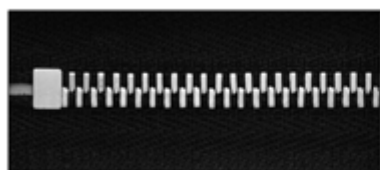

The **FlexFix®** snap fasteners are engineered to withstand up to 50,000 opening and closing cycles without significant wear to functional parts, thanks to the integrated polyacetal resin (POM) insert. These fasteners are available in various sizes and materials to meet diverse application needs.
